Did you know?

Solix's Email Archiving solution is an industry-first solution which is compliant to **FINRA, SEC, HIPAA, SOX and CCPA.**

Key Capabilities

Storage and Cost Optimization

Redefine archive and purge policies to ensure emails are directly retained at source for a given period. Archived emails are safely purged from the source thus freeing up critical storage in the source system.

360-degree Email Archival

Using multiple collection methods such as SMTP Journaling, mailbox synchronization, and file uploads, organizations can now securely capture and archive all outgoing and incoming emails as well as past email data into a centralized archive repository.

Comprehensive Indexing

Enables copying of all original email data including the email content, detailed metadata along with attachments and indexes the aforementioned data for an efficient search and discovery as per future requisites.

Targeted Supervision & Monitoring

Enables creation of custom policies to classify and monitor emails in near real-time, based on email content, metadata, or presence of any sensitive information. Triggers alerts and notifications to respective teams based on criteria to ensure swift action.

Retention and Legal Hold

Compliance and legal teams can create comprehensive retention and legal holds at an organization, user, email or metadata level easily to help with faster and effective implementation of policies.

e-Discovery with Inbuilt Case Folders

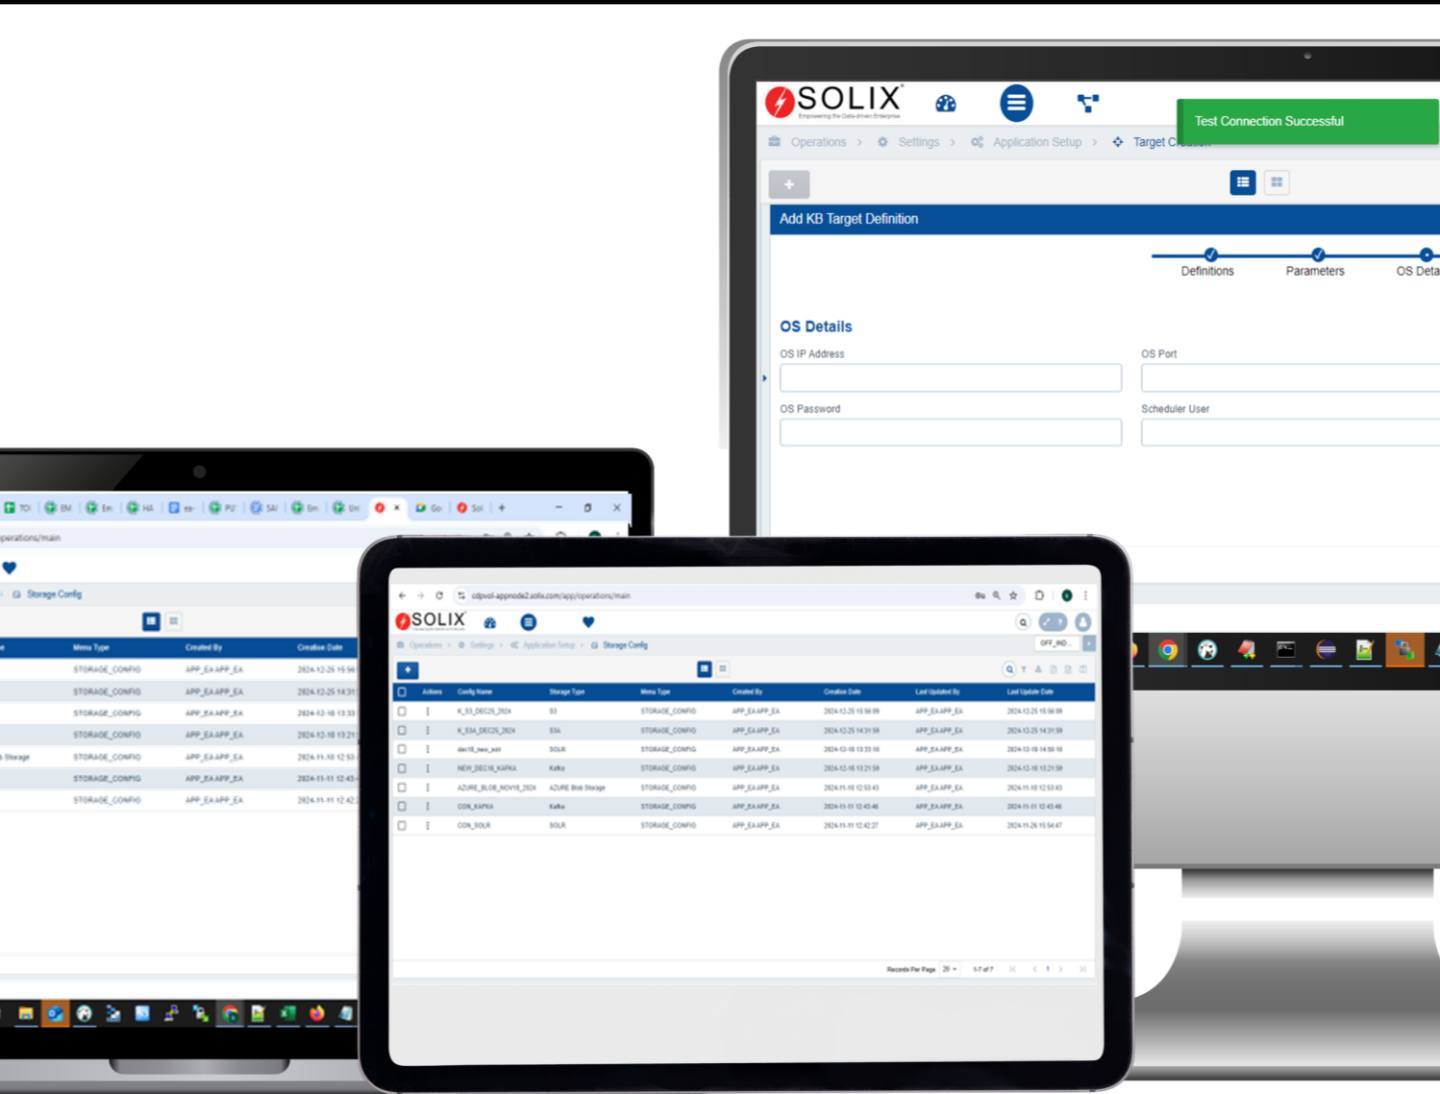

Compliance and legal teams perform faster and efficient eDiscovery mapped searches across all inboxes based on a keyword and/or multiple filters to quickly identify emails of interest. They can add retention, legal hold, tags or comments on the emails identified.

Powerful Search

Advanced multi-level full text keyword & filter-based search helps users to find emails of interest faster. The intelligent search enables quicker search based on email metadata, email content etc.

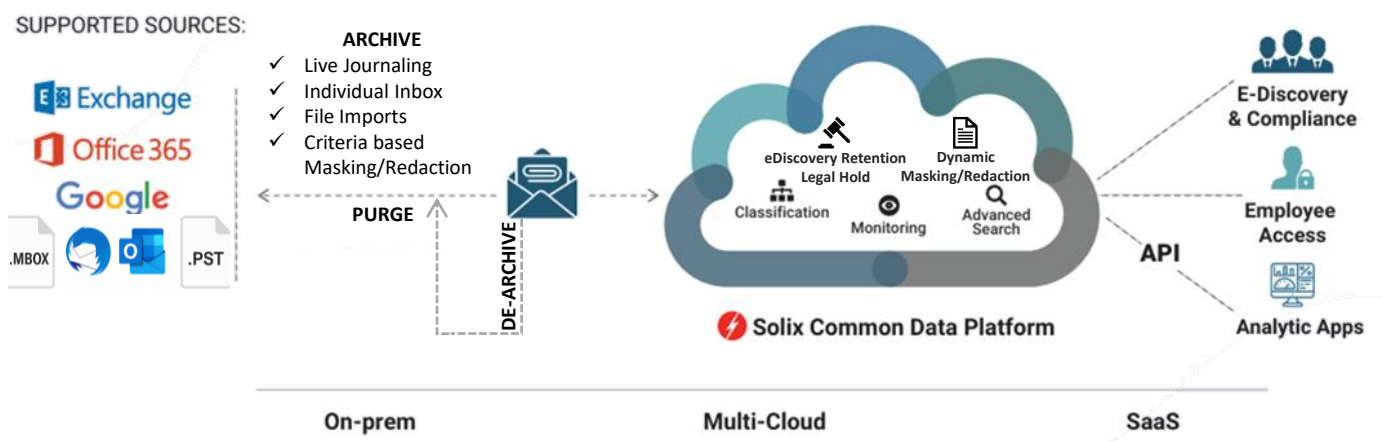

Self-Service Access

With Solix Email Archiving there is no need for business users to maintain local .pst copies of archived emails, there's a provision for individual logins whereby the archived emails can be viewed and accessed in a client like interface.
